Ordering Information….

Designate someone to check with operations that the standard model will fill their needs. It may be that the loads being positioned are bigger than a standard pallet. Check headroom clearance is ok. Remember - extra width = extra headroom. Check right or left hand arrangement [Standard right hand operation is shown above]

Safety Equipment

Model ... **Mr Mezzanine** **Part # 49019**

Special Note ….

This product conforms with the Australian BAS.
The top railing height is set at 1000mm.

Should you have headroom issues, we can reduce the top rail height to 900mm, which will still conform with AS1657, the standard relating to platforms and handrails.

Mr.Mezzanine - #49019

Operating Instructions

The mezzanine safety gate has had simplicity designed into it.
It has been designed to conform with AS1657, the standard relating to platforms and handrails, so you can feel secure working in the gate area.

When the single arm is up, it grants you access to the pallet.

To open the forklift side of the gate system,
☐ Slide the locking bar towards you until it stops.
☐ Reach up and grasp the single arm
☐ Slowly pull down

To close the forklift side of the gate system,
☐ Grasp the single arm
☐ Slowly lift up
☐ Slide the locking bar away from you until it stops.

The system is counterbalanced, so the effort is low.
This imparts some momentum to it's operation….

☐ **Operate slowly**
☐ **Keep hold of the bar until movement is complete**
☐ **Never stand underneath the bar when operating the gate**
☐ **Never climb under the single bar**
☐ **Never try to lift the bar with your forklift**
